

Precious Gem Beard Tongue
Penstemon digitalis 'Precious Gem'

Plant Height: 24 inches

Flower Height: 3 feet

Spread: 18 inches

Spacing: 14 inches

Sunlight:

Hardiness Zone: 4a

Other Names: Beardtongue

Description:

A new variety, with beautiful copper bronze emerging foliage and stems that progress to dark red in the fall; glorious blooms of soft pink contrast the coppery foliage for visual impact; plants are vigorous and very drought tolerant

Ornamental Features

Precious Gem Beard Tongue has masses of beautiful spikes of pink tubular flowers with white overtones and lavender throats rising above the foliage from early to mid summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive narrow leaves emerge coppery-bronze in spring, turning green in color. The foliage often turns red in fall. The dark red stems are very colorful and add to the overall interest of the plant.

Landscape Attributes

Precious Gem Beard Tongue is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Precious Gem Beard Tongue is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Precious Gem Beard Tongue will grow to be about 24 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Precious Gem Beard Tongue is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
