

**Gloriosa Lily**  
*Gloriosa superba*

Height: 6 feet

Spread: 24 inches

Sunlight: ○ ●

Hardiness Zone: 8a

Other Names: Flame Lily, Glory Lily, Tiger Claw, Fire Lily

**Description:**

This variety is a tropical vine that climbs by tendrils in the leaf tips; dazzling yellow and orange-red lily-like flowers emerge from summer to fall; best in moderate climates with cool nights; a great container plant

**Ornamental Features**

Gloriosa Lily features showy yellow flowers with orange overtones and red streaks along the branches from early to late summer. It has dark green deciduous foliage. The glossy pointy leaves do not develop any appreciable fall color.

**Landscape Attributes**

Gloriosa Lily is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This woody vine will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Invasive
- Self-Seeding

Gloriosa Lily is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use
- Container Planting

### **Planting & Growing**

Gloriosa Lily will grow to be about 6 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it tends to be leggy near the base and should be underplanted with low-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This woody vine does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil pH, but grows best in rich soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by multiplication of the underground bulbs.

Gloriosa Lily makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
