

Glen Gold Tuliptree *Liriodendron tulipifera 'Glen Gold'*

Height: 60 feet

Spread: 30 feet

Sunlight: ○

Hardiness Zone: 4b

Other Names: Tulip Magnolia, Yellow Poplar, Whitewood

Description:

This handsome, low maintenance shade tree features golden summer foliage that turns yellow in fall, and large greenish-yellow tulip-shaped flowers with streaks of orange; needs lots of moisture and room to grow; may take up to 25 years to begin flowering

Ornamental Features

Glen Gold Tuliptree has chartreuse cup-shaped flowers with gold eyes and orange streaks held atop the branches from mid to late spring. It has green-variegated chartreuse foliage with hints of yellow which emerges gold in spring. The large square leaves turn an outstanding yellow in the fall. The furrowed gray bark is extremely showy and adds significant winter interest.

Landscape Attributes

Glen Gold Tuliptree is a deciduous tree with a strong central leader and a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance tree that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Glen Gold Tuliptree is recommended for the following landscape applications;

- Shade
- Vertical Accent

Planting & Growing

Glen Gold Tuliptree will grow to be about 60 feet tall at maturity, with a spread of 30 feet. It has a high canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This is a selection of a native North American species.
