

Swordleaf Inula
Inula ensifolia

Height: 12 inches

Spread: 18 inches

Sunlight:

Hardiness Zone: 2a

Description:

An easy to grow selection ideal for edging sunny borders, containers or rock gardens; bushy mounds of green, narrow foliage are topped with bright yellow daisies; blooms mid summer to fall; good weather tolerance-can handle heat and humidity

Ornamental Features

Swordleaf Inula has masses of beautiful yellow daisy flowers with gold eyes at the ends of the stems from mid to late summer, which are most effective when planted in groupings. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Swordleaf Inula is an herbaceous perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Swordleaf Inula is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Swordleaf Inula will grow to be about 12 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by division.

Swordleaf Inula is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
