

## Candlelight Alberta Spruce

*Picea glauca 'Candlelight'*

Height: 6 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 2a

Other Names: White Spruce

### Description:

This sensational dwarf selection features bright golden-yellow new growth in summer, giving it a candle-like glow; pyramidal in form and slow growing, with a bushy, dense habit; great as a garden accent, or addition to a rock garden

### Ornamental Features

Candlelight Alberta Spruce is a dwarf conifer which is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has attractive bluish-green evergreen foliage which emerges yellow in spring. The needles are highly ornamental and remain bluish-green throughout the winter.

### Landscape Attributes

Candlelight Alberta Spruce is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Candlelight Alberta Spruce is recommended for the following landscape applications;

- Accent
- Rock/Alpine Gardens
- General Garden Use

### **Planting & Growing**

Candlelight Alberta Spruce will grow to be about 6 feet tall at maturity, with a spread of 4 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.
