

Laurel Sumac
Malosma laurina

Height: 15 feet

Spread: 20 feet

Sunlight: ○

Hardiness Zone: 10a

Other Names: Taco Plant, Lentisco, syn. *Rhus laurina*

Description:

A large, rounded, evergreen coastal shrub or small tree with fragrant, lance shaped green leaves all year; large clusters of fragrant cream flowers in late spring to early summer, followed by red drupes; not frost tolerant

Ornamental Features

Laurel Sumac features showy clusters of fragrant creamy white star-shaped flowers at the ends of the branches from late spring to mid summer. It has attractive green foliage with pointy red spines which emerges red in spring. The fragrant pointy leaves are highly ornamental and remain green throughout the winter. The fruits are showy red drupes carried in abundance from late summer to early fall. The smooth brown bark and brick red branches are extremely showy and add significant winter interest.

Landscape Attributes

Laurel Sumac is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds, bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Laurel Sumac is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Windbreaks and Shelterbelts
- Naturalizing And Woodland Gardens

Planting & Growing

Laurel Sumac will grow to be about 15 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is native to parts of North America..
