

**Ironclad Viburnum**  
*Viburnum sieboldii* 'KLMfour'

Height: 15 feet

Spread: 12 feet

Sunlight: ○ ●

Hardiness Zone: 4a

Other Names: Siebold Viburnum

**Description:**

A large, coarsely-textured ornamental shrub covered in creamy white flower clusters in spring followed by very showy bright pink-red fruits that slowly fade through dark red to black, leaving behind colorful flower stems for a long performance

**Ornamental Features**

Ironclad Viburnum is covered in stunning creamy white flat-top flowers at the ends of the branches in mid spring. The red fruits are held in abundance in spectacular clusters from mid summer to mid fall. It has dark green deciduous foliage. The textured oval leaves do not develop any appreciable fall color.

**Landscape Attributes**

Ironclad Viburnum is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its strikingly bold and coarse texture can be very effective in a balanced landscape composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Ironclad Viburnum is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Ironclad Viburnum will grow to be about 15 feet tall at maturity, with a spread of 12 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
