

Creeping Cotoneaster
Cotoneaster nanshan

Height: 3 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 4a

Description:

A choice plant for massing and groundcover, featuring arching, creeping branches that tend to root where they touch the soil and form a dense mound; pretty pink flowers in spring followed by brilliant red fruit in fall; semi-evergreen

Ornamental Features

Creeping Cotoneaster is primarily valued in the garden for its cascading habit of growth. It features tiny clusters of shell pink flowers along the branches in mid spring. It has dark green deciduous foliage. The small glossy oval leaves turn an outstanding brick red in the fall.

Landscape Attributes

Creeping Cotoneaster is a multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

Planting & Growing

Creeping Cotoneaster will grow to be about 3 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America.
