

Fruitland Fortune's Osmanthus
Osmanthus x fortunei 'Fruitlandii'

Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 6b

Other Names: Tea Olive, Sweet Olive

Description:

A fine selection with smaller, spiny, lustrous leaves that are holly-like, but it's actually related to lilac and privet; an upright shrub, covered with fragrant, white trumpet flowers in fall; more adaptable than holly

Ornamental Features

Fruitland Fortune's Osmanthus is covered in stunning fragrant creamy white tubular flowers along the branches in early fall. It has attractive dark green evergreen foliage. The small spiny oval leaves are highly ornamental and remain dark green throughout the winter. The smooth dark gray bark is extremely showy and adds significant winter interest.

Landscape Attributes

Fruitland Fortune's Osmanthus is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Fruitland Fortune's Osmanthus is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

Planting & Growing

Fruitland Fortune's Osmanthus will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
