

**Beijing Beauty™ Mahonia**  
*Mahonia 'sPg-15-1'*

Height: 5 feet

Spread: 5 feet

Sunlight: ○ ● ●

Hardiness Zone: 7b

Other Names: Oregon Grape Holly

**Description:**

A showy upright-mounded shrub with holly-shaped leaves that tint bronze in winter; showy yellow flowers in fall and very attractive purple grape-like fruit that lasts until spring; needs moist acid soils, some shade and protection from winter winds

**Ornamental Features**

Beijing Beauty Mahonia is primarily grown for its highly ornamental fruit. It features an abundance of magnificent blue berries with black overtones from mid winter to early spring. It has attractive dark green evergreen foliage which emerges coral-pink in spring. The spiny pinnately compound leaves are highly ornamental and remain dark green throughout the winter. It features showy racemes of fragrant yellow flowers at the ends of the branches from early to mid fall.

**Landscape Attributes**

Beijing Beauty Mahonia is a dense multi-stemmed evergreen shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Beijing Beauty Mahonia is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### **Planting & Growing**

Beijing Beauty Mahonia will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub performs well in both full sun and full shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
