

**Blue Sargent Juniper**  
*Juniperus chinensis 'var. sargentii Glauca'*

Height: 12 inches

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 4a

**Description:**

A low growing evergreen with bluish-gray needle-like foliage and showy blue berries, wide growing and sprawling habit; ideal for use as a low groundcover in sunny dry locations, a real favorite with garden designers for year-round color

**Ornamental Features**

Blue Sargent Juniper is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has attractive blue evergreen foliage. The scale-like sprays of foliage are highly ornamental and remain blue throughout the winter. It produces blue berries from late spring to late winter.

**Landscape Attributes**

Blue Sargent Juniper is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Blue Sargent Juniper is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

**Planting & Growing**

Blue Sargent Juniper will grow to be about 12 inches tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
