

Green Carpet Gray Dogwood
Cornus racemosa 'Green Carpet'

Height: 3 feet

Spread: 5 feet

Sunlight: ○ ● ●

Hardiness Zone: 4

Description:

A showy dwarf variety for general garden or massing use; white flowers in spring, white berries in fall on showy red stems, and good fall color; very adaptable, but suckers profusely

Ornamental Features

Green Carpet Gray Dogwood has clusters of creamy white flowers at the ends of the branches in late spring. It has green deciduous foliage. The pointy leaves turn an outstanding deep purple in the fall. It produces white berries in late summer.

Landscape Attributes

Green Carpet Gray Dogwood is a multi-stemmed deciduous shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep, and can be pruned at anytime. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Green Carpet Gray Dogwood is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Green Carpet Gray Dogwood will grow to be about 3 feet tall at maturity, with a spread of 5 feet. It has a low canopy. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub performs well in both full sun and full shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
