

## **Morgan Maple** *Acer rubrum 'Morgan'*

Height: 50 feet

Spread: 40 feet

Sunlight:

Hardiness Zone: 4

### **Description:**

A silver maple/red maple hybrid with excellent and reliable fall color, showy red flowers along the branches in early spring; a good shade tree choice where red maples may not prosper

### **Ornamental Features**

Morgan Maple features showy clusters of red flowers along the branches in early spring before the leaves. It has green deciduous foliage. The lobed leaves turn an outstanding orange in the fall. The furrowed gray bark and brick red branches add an interesting dimension to the landscape.

### **Landscape Attributes**

Morgan Maple is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Morgan Maple is recommended for the following landscape applications;

- Accent
- Shade

### Planting & Growing

Morgan Maple will grow to be about 50 feet tall at maturity, with a spread of 40 feet. It has a high canopy with a typical clearance of 7 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
