

Persian Pixie Daylily
Hemerocallis 'Persian Pixie'

Plant Height: 10 inches

Flower Height: 16 inches

Spread: 10 inches

Spacing: 8 inches

Sunlight:

Hardiness Zone: 4

Description:

A compact variety producing small salmon coral blend trumpets with yellow-green throats; great grassy texture and form; diploid; a perfect addition to a smaller garden or border space

Ornamental Features

Persian Pixie Daylily features bold fragrant salmon trumpet-shaped flowers with coral-pink overtones and yellow throats at the ends of the stems in mid summer. The flowers are excellent for cutting. Its grassy leaves remain green in color throughout the year.

Landscape Attributes

Persian Pixie Daylily is an herbaceous evergreen perennial with a shapely form and gracefully arching foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Persian Pixie Daylily is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Persian Pixie Daylily will grow to be about 10 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 10 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
