

**Tundra Korean Fir**  
*Abies koreana 'Tundra'*

Height: 24 inches

Spread: 3 feet

Sunlight:

Hardiness Zone: 4

**Description:**

A beautiful, slow growing dwarf variety that has a dense, mounded habit; flat, deep green needles have white undersides; showy white buds crown the branches in late fall and winter; ideal for a rock garden, particular as to siting

**Ornamental Features**

Tundra Korean Fir is a dwarf conifer which is primarily valued in the garden for its interestingly mounded form. It has dark green foliage with silver undersides. The needles remain dark green throughout the winter.

**Landscape Attributes**

Tundra Korean Fir is a dense multi-stemmed evergreen shrub with a mounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Tundra Korean Fir is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use

**Planting & Growing**

Tundra Korean Fir will grow to be about 24 inches tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in sandy soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
