

**Comanche Crapemyrtle**  
*Lagerstroemia 'Comanche'*

Height: 12 feet

Spread: 12 feet

Sunlight:

Hardiness Zone: 6

Other Names: Comanche Crapemyrtle, Crape Myrtle, Crepe Myrtle

**Description:**

This outstanding semi-dwarf crapemyrtle produces volumes of coral-pink blooms; coppery new foliage turns deep green, then red-orange in fall; a captivating focal point for the garden or border; also good for container planting

**Ornamental Features**

Comanche Crapemyrtle is clothed in stunning panicles of coral-pink frilly flowers with pink overtones at the ends of the branches from mid summer to early fall. It has attractive dark green deciduous foliage which emerges coppery-bronze in spring. The glossy oval leaves are highly ornamental and turn red in fall.

**Landscape Attributes**

Comanche Crapemyrtle is a dense multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Comanche Crapemyrtle is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

### Planting & Growing

Comanche Crape myrtle will grow to be about 12 feet tall at maturity, with a spread of 12 feet. It tends to be a little leggy, with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Comanche Crape myrtle makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
