

**Dumosa Moss Falsecypress**  
*Chamaecyparis pisifera 'Squarrosa Dumosa'*

Height: 10 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 4

Other Names: Japanese Falsecypress, Sawara Falsecypress

**Description:**

A compact mounded garden evergreen with soft and mossy silver-gray foliage which turns bronze in fall, a great choice for adding texture to a garden, also used for bonsai; prefers humid environments

**Ornamental Features**

Dumosa Moss Falsecypress has attractive silvery blue evergreen foliage on a dwarf conifer with a round habit of growth. The scale-like sprays of foliage are highly ornamental and turn coppery-bronze in the fall, which persists throughout the winter.

**Landscape Attributes**

Dumosa Moss Falsecypress is a multi-stemmed evergreen shrub with a more or less rounded form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Dumosa Moss Falsecypress is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Dumosa Moss Falsecypress will grow to be about 10 feet tall at maturity, with a spread of 8 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
