

Golden Spray Redcedar
Juniperus virginiana 'Golden Spray'

Height: 4 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 3

Other Names: Eastern Red Juniper

Description:

An excellent massing or groundcover evergreen shrub; yellow-gold tipped branches on an upright, arching habit of growth, very adaptable but needs full sun; excellent in large groupings

Ornamental Features

Golden Spray Redcedar is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental upright and spreading habit of growth. It has attractive gold-tipped bluish-green foliage. The scale-like sprays of foliage are highly ornamental and remain bluish-green throughout the winter. It produces silvery blue berries from late spring to late winter.

Landscape Attributes

Golden Spray Redcedar is a multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Golden Spray Redcedar is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Golden Spray Redcedar will grow to be about 4 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
