Clusters of stunning blooms that are red, with dramatic streaks of hot pink through the petals; a compact plant that is awash in color all summer; purplish color in acidic soil; a sensational ornamental shrub for indoor or patio containers

**Features & Attributes**

Grateful Red Hydrangea features showy clusters of red flowers with hot pink overtones at the ends of the branches from early to late summer. The flowers are excellent for cutting. Its glossy pointy leaves remain forest green in color throughout the year.

This is a multi-stemmed houseplant with a mounded form. Its relatively coarse texture stands it apart from other indoor plants with finer foliage. This plant may benefit from an occasional pruning to look its best.

**Planting & Growing**

When grown indoors, Grateful Red Hydrangea can be expected to grow to be about 3 feet tall at maturity, with a spread of 3 feet. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years. This houseplant should be situated in a location that gets indirect sunlight at most, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It requires an evenly moist well-drained soil for optimal growth. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type, but has a definite preference for alkaline soil. Contact the store for specific recommendations on pre-mixed potting soil for this plant.
