Features & Attributes

Cream De Mint Dwarf Mock Orange's attractive glossy oval leaves emerge chartreuse, turning light green in color with distinctive creamy white edges throughout the year on a plant with a round habit of growth.

This is a dense multi-stemmed evergreen houseplant with a more or less rounded form. Its extremely fine and delicate texture is quite ornamental and should be used to full effect. This plant can be pruned at any time to keep it looking its best.

Planting & Growing

When grown indoors, Cream De Mint Dwarf Mock Orange can be expected to grow to be about 30 inches tall at maturity, with a spread of 30 inches. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 40 years. This houseplant will do well in a location that gets either direct or indirect sunlight, although it will usually require a more brightly-lit environment than what artificial indoor lighting alone can provide. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type or pH; an average potting soil should work just fine.
