# **Plant Finder**

Ogon Nepal Holly Ilex integra 'Ogon'

Height: 15 feet

Spread: 8 feet

Sunlight: O

Hardiness Zone: 6

Other Names: Gold Nepal Holly, Mochi Tree, Mochi Holly

### **Description:**

A handsome, vigorously upright growing shrub producing glorious golden-yellow foliage that slowly matures to green; plant in full sun for best color; a wonderful specimen for a shrub border, or use for screening; pollination requires nearby male

### **Ornamental Features**

Ogon Nepal Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent red berries from late fall to mid winter. It has attractive gold foliage with hints of yellow which emerges coppery-bronze in spring. The glossy oval leaves are highly ornamental and remain gold throughout the winter.

#### Landscape Attributes

Ogon Nepal Holly is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and bees to your yard. It has no significant negative characteristics.

Ogon Nepal Holly is recommended for the following landscape applications;

- Accent
- Mass Planting
- Naturalizing And Woodland Gardens

## **Planting & Growing**

Ogon Nepal Holly will grow to be about 15 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This shrub does best in full sun to partial shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. It is particular about its soil conditions, with a strong preference for rich, acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
