

Joey Avocado
Persea americana 'Joey'

Height: 25 feet

Spread: 25 feet

Sunlight:

Hardiness Zone: 8

Description:

This selection produces high yields of oval, purplish fruits with a rich flavor; more cold hardy than other Mexican avocados; great for eating fresh, added to salads, or blended into sauces or dips; an excellent tropical look for home landscapes

Edible Qualities

Joey Avocado is a medium-sized tree that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces dark green oval fruit (technically 'drupes') with a deep purple blush and buttery yellow flesh which are typically harvested when mature. The fruit will often fade to black over time. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a mild taste and a fleshy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Sauces

Features & Attributes

Joey Avocado has attractive dark green evergreen foliage which emerges coppery-bronze in spring on a tree with an upright spreading habit of growth. The glossy narrow compound leaves are highly ornamental and remain dark green throughout the winter. It features subtle clusters of chartreuse star-shaped flowers with green overtones at the ends of the branches in mid spring. The fruits are showy dark green drupes with a deep purple blush and which fade to black over time, which are displayed in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up. The rough brown bark adds an interesting dimension to the landscape.

This is an evergreen tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds, bees and butterflies to your yard. It has no significant negative characteristics.

Aside from its primary use as an edible, Joey Avocado is suitable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping
- Container Planting

Planting & Growing

Joey Avocado will grow to be about 25 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tree is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Joey Avocado is a good choice for the edible garden, but it is also well-suited for use in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
