

Hot Head® Arborvitae

Thuja occidentalis 'RutThu#1'

Height: 3 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 3

Other Names: Eastern White Cedar

Description:

A handsome dwarf evergreen shrub with very fine-textured, vibrant evergreen foliage; forms a compact ball shape without pruning; ideal for home garden use and in rock gardens; best with some sun, protect from drying winds

Ornamental Features

Hot Head Arborvitae is a dwarf conifer which is primarily valued in the garden for its ornamental globe-shaped form. It has attractive dark green evergreen foliage which emerges light green in spring. The ferny sprays of foliage are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Hot Head Arborvitae is a dense multi-stemmed evergreen shrub with a more or less rounded form. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Hot Head Arborvitae is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Hot Head Arborvitae will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.

Hot Head Arborvitae makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
