

**Streetside® Maple**  
*Acer campestre 'JFS Schichtel2'*

Height: 35 feet

Spread: 18 feet

Sunlight:

Hardiness Zone: 4

Other Names: Hedge Maple, Field Maple

**Description:**

A distinctively narrow selection with upright, sweeping branches; excellent as a shade or street tree; heat tolerant dark green leaves turn yellow in fall; insect resistant; adapts to a wide range of growing conditions

**Ornamental Features**

Streetside Maple has dark green deciduous foliage on a tree with an oval habit of growth. The lobed leaves turn yellow in fall.

**Landscape Attributes**

Streetside Maple is a dense deciduous tree with a strong central leader and a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Streetside Maple is recommended for the following landscape applications;

- Accent
- Shade
- Hedges/Screening
- Windbreaks and Shelterbelts

**Planting & Growing**

Streetside Maple will grow to be about 35 feet tall at maturity, with a spread of 18 feet. It has a low canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This tree does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type, but has a definite preference for alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
