

## Siebold Primrose

*Primula x auricula 'Sieboldii'*

Plant Height: 6 inches

Flower Height: 12 inches

Spread: 8 inches

Spacing: 6 inches

Sunlight:

Hardiness Zone: 2

Other Names: Dusty Miller Primrose, Cowslip, Polyanthus

### Ornamental Features

Siebold Primrose features delicate clusters of indigo star-shaped flowers with yellow eyes and purple tips at the ends of the stems in early spring. Its small serrated oval leaves remain green in color throughout the year.

### Landscape Attributes

Siebold Primrose is an herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It has no significant negative characteristics.

Siebold Primrose is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use

### Planting & Growing

Siebold Primrose will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 8 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 6 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant performs well in both full sun and full shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
