### Features & Attributes

Hass Avocado has attractive dark green evergreen foliage which emerges coppery-bronze in spring on a tree with an upright spreading habit of growth. The glossy oval compound leaves are highly ornamental and remain dark green throughout the winter. It features subtle clusters of fragrant white star-shaped flowers with chartreuse overtones at the ends of the branches from early to mid spring. The fruits are showy dark green drupes with a deep purple blush and which fade to black over time, which are displayed in late summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up. The rough brown bark adds an interesting dimension to the landscape.

This is an evergreen tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees, butterflies and squirrels to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

Aside from its primary use as an edible, Hass Avocado is suitable for the following landscape applications;

- Accent
- Shade
- Hedges/Screening
- Orchard/Edible Landscaping
- Container Planting

### Planting & Growing

Hass Avocado will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more. While it is considered to be somewhat self-pollinating, it tends to set heavier quantities of fruit with a different variety of the same species growing nearby.

This tree is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
