

September Wonder® Fuji Apple

Malus 'September Wonder'

Height: 15 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 4

Description:

This hardy, early ripening Fuji variety gives those in colder areas the opportunity to grow these popular apples; produces sweet, crisp and juicy apples that are yellow-green to mostly red; needs a pollinator, well-drained soil and full sun

Edible Qualities

September Wonder Fuji Apple is a small tree that is commonly grown for its edible qualities. It produces chartreuse round apples (which are botanically known as 'pomes') with a scarlet blush and white flesh which are usually ready for picking from late summer to early fall. The apples have a sweet taste and a juicy texture.

The apples are most often used in the following ways:

- Fresh Eating
- Baking

Features & Attributes

September Wonder Fuji Apple features showy clusters of lightly-scented white flowers along the branches in mid spring, which emerge from distinctive red flower buds. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy chartreuse apples with a scarlet blush, which are carried in abundance from mid summer to early fall. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, September Wonder Fuji Apple is suitable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

September Wonder Fuji Apple will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. This plant will benefit from an application of bonemeal and/or mycorrhizal fertilizer at the time of planting. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
