

**Round-Leaf Serviceberry**  
*Amelanchier sanguinea*

Height: 8 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 4

Other Names: Red-Twigged Serviceberry, Juneberry

**Description:**

Vibrant reddish branchlets distinguish this from others of this species; clusters of pretty star-shaped white flowers in spring; purple-black berries will attract birds to the garden

**Ornamental Features**

Round-Leaf Serviceberry is primarily grown for its highly ornamental fruit. It features an abundance of magnificent deep purple berries from late spring to early summer. It is blanketed in stunning racemes of creamy white flowers rising above the foliage from mid to late spring before the leaves. It has dark green deciduous foliage which emerges red in spring. The round leaves turn an outstanding yellow in the fall.

**Landscape Attributes**

Round-Leaf Serviceberry is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Round-Leaf Serviceberry is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Round-Leaf Serviceberry will grow to be about 8 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is native to parts of North America.
