

## Skybound Sugar Maple

*Acer saccharum 'Skybound'*

Height: 60 feet

Spread: 40 feet

Sunlight:

Hardiness Zone: 4

Other Names: Hard Maple, Rock Maple

### Description:

This is a tightly upright variety with fall colors ranging from gold to burnt orange to red, an ideal form for use in tighter spaces or smaller landscapes; adaptable to soils, but dislikes air pollution and compaction

### Ornamental Features

Skybound Sugar Maple is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has dark green deciduous foliage. The lobed leaves turn outstanding shades of gold, orange and red in the fall.

### Landscape Attributes

Skybound Sugar Maple is a dense deciduous tree with a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Skybound Sugar Maple is recommended for the following landscape applications;

- Accent
- Shade

### Planting & Growing

Skybound Sugar Maple will grow to be about 60 feet tall at maturity, with a spread of 40 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a slow rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
