

**Brilliant Prairie Mallow**  
*Sidalcea oregana 'Brilliant'*

Plant Height: 20 inches

Flower Height: 3 feet

Spread: 24 inches

Spacing: 18 inches

Sunlight:

Hardiness Zone: 4

Other Names: Checker Mallow

**Description:**

An outstanding variety presenting tall spikes of brilliant hot pink and rose red blooms; a mid sized upright perennial great for the middle of a border; cut fading flower spikes to the ground to encourage a second flush of blooming in autumn

**Ornamental Features**

Brilliant Prairie Mallow has masses of beautiful spikes of hot pink round flowers rising above the foliage from early to mid summer, which emerge from distinctive red flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its round leaves remain green in color throughout the season.

**Landscape Attributes**

Brilliant Prairie Mallow is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Brilliant Prairie Mallow is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### **Planting & Growing**

Brilliant Prairie Mallow will grow to be about 20 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
