

Annemieke Fatshedera
Fatshedera x lizei 'Annemieke'

Height: 6 feet

Spread: 5 feet

Sunlight: ● ●

Hardiness Zone: 8

Other Names: Tree Ivy; Aralia Ivy

Description:

This plant is considered a semi-climbing shrub/vine; the striking leaves are green with beautiful bright yellow variegation; a great way to add color to a border planting, or along a wall or trellis; does not readily climb without assistance

Ornamental Features

Annemieke Fatshedera has attractive yellow-variegated dark green foliage on a plant with an upright spreading habit of growth. The lobed leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Annemieke Fatshedera is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. It has no significant negative characteristics.

Annemieke Fatshedera is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Annemieke Fatshedera will grow to be about 6 feet tall at maturity, with a spread of 5 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
