

Queen Of Sheba Vine

Podranea brycei

Height: 40 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 9

Other Names: Zimbabwe Creeper

Description:

A stunning twining vine that produces admirable glossy green foliage and large beautiful pink trumpet flowers all season long; water during dry spells; must have strong support because vines can become quite large, prune to maintain size

Planting & Growing

This plant is native to the tropics and prefers growing in moist environments with evenly warm conditions all year round. In our climate, it is usually grown as an outdoor annual in the garden or in a container. If you want it to survive the winter, it can be brought in to the house and provided with special care, and then returned to the garden the following season. In its preferred tropical habitat, as a shrub it can grow to be around 40 feet tall at maturity, with a spread of 3 feet. However, when grown as an annual or when overwintered indoors, it can be expected to perform quite differently, and its exact height and spread will depend on many factors; you may wish to consult with our experts as to how it might perform in your specific application and growing conditions.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This species is not originally from North America.

-- THIS IS A TROPICAL PLANT AND SHOULD NOT BE EXPECTED TO SURVIVE THE WINTER OUTDOORS IN OUR CLIMATE --
