

## Senator Yew

*Taxus x media 'Senzam'*

Height: 18 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 4a

### Description:

A versatile landscape shrub that naturally forms a pyramid with very tight branching; deep green foliage dotted with red berries in summer; makes a great hedge or border plant, takes pruning very well, does well in shade

### Ornamental Features

Senator Yew is primarily grown for its highly ornamental fruit. The fruits are showy red drupes carried in abundance from early to late fall. It has dark green evergreen foliage which emerges light green in spring. The ferny sprays of foliage remain dark green throughout the winter.

### Landscape Attributes

Senator Yew is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Senator Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

### Planting & Growing

Senator Yew will grow to be about 18 feet tall at maturity, with a spread of 6 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
