

Purple Satin Mallow

Malva sylvestris 'Purple Satin'

Plant Height: 3 feet

Flower Height: 4 feet

Spread: 24 inches

Sunlight: 

Hardiness Zone: 4a

Other Names: Tree Mallow

Description:

An excellent variety for season long color, this striking mallow displays violet-pink blooms with deep purple veins from early summer until early fall; a tough adaptable plant that is sure to please

Ornamental Features

Purple Satin Mallow features bold spikes of hot pink round flowers with plum purple eyes and deep purple veins rising above the foliage from early summer to early fall, which emerge from distinctive purple flower buds. The flowers are excellent for cutting. Its crinkled round leaves remain green in color throughout the season.

Landscape Attributes

Purple Satin Mallow is an herbaceous perennial with a rigidly upright and towering form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies and hummingbirds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Purple Satin Mallow is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Purple Satin Mallow will grow to be about 3 feet tall at maturity extending to 4 feet tall with the flowers, with a spread of 24 inches. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 4 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
