

New World Red Maple

Acer rubrum 'New World'

Height: 40 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 4a

Other Names: Swamp Maple, Scarlet Maple

Description:

A wonderful shade or street tree with consistently spectacular red-orange fall color; small, red male flowers only on this seedless variety; intolerant of alkaline soils

Ornamental Features

New World Red Maple features showy clusters of red flowers along the branches in early spring before the leaves. It has dark green deciduous foliage which emerges red in spring. The lobed leaves turn an outstanding coppery-bronze in the fall. The furrowed silver bark and brick red branches add an interesting dimension to the landscape.

Landscape Attributes

New World Red Maple is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

New World Red Maple is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

New World Red Maple will grow to be about 40 feet tall at maturity, with a spread of 20 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
