

**Sunlight Lace Hinoki Falsecypress**  
*Chamaecyparis obtusa 'Sunlight Lace'*

Height: 15 feet

Spread: 12 feet

Sunlight:

Hardiness Zone: 4b

**Description:**

A graceful, showy selection, featuring fine, lacy sprays of bright lemon yellow foliage on a pyramidal form; displays most intense color in full sun, but position for late afternoon shade; best used as an accent; prefers humid conditions

**Ornamental Features**

Sunlight Lace Hinoki Falsecypress is a dwarf conifer which is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has attractive lime green-variegated lemon yellow foliage with hints of gold. The scale-like sprays of foliage are highly ornamental and turn coppery-bronze in the fall, which persists throughout the winter. The shaggy antique red bark adds an interesting dimension to the landscape.

**Landscape Attributes**

Sunlight Lace Hinoki Falsecypress is a multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Sunlight Lace Hinoki Falsecypress is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Sunlight Lace Hinoki Falsecypress will grow to be about 15 feet tall at maturity, with a spread of 12 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
