

**Ice Princess Heath**  
*Erica carnea 'Ice Princess'*

Plant Height: 4 inches

Flower Height: 6 inches

Spread: 24 inches

Sunlight:

Hardiness Zone: 5a

Other Names: Spring Heath, Snow Heath, Winter Heath

**Description:**

An excellent groundcover with pure white, urn shaped flowers in late winter to mid spring; ideal for poor soils, also great for massing in the garden; requires organic highly acidic soil, full sun and absolutely no standing water

**Ornamental Features**

Ice Princess Heath is clothed in stunning spikes of white bell-shaped flowers with brown anthers rising above the foliage from late winter to mid spring. It has dark green evergreen foliage which emerges chartreuse in spring. The tiny needles remain dark green throughout the winter.

**Landscape Attributes**

Ice Princess Heath is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Ice Princess Heath is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens

### **Planting & Growing**

Ice Princess Heath will grow to be only 4 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 24 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
