

Chirimen Kadsura Vine

Kadsura japonica 'Chirimen'

Height: 15 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 6b

Description:

An ornamental vine with glossy, variegated leaves; makes a beautiful screen when grown on a trellis or arbor; leaves can scorch but are tolerant of the heat when watered adequately

Ornamental Features

Chirimen Kadsura Vine is primarily valued in the landscape for its broadly spreading habit of growth. It has attractive white-spotted green foliage. The glossy oval leaves are highly ornamental and remain green throughout the winter.

Landscape Attributes

Chirimen Kadsura Vine is a multi-stemmed evergreen woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance woody vine, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Chirimen Kadsura Vine is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use
- Container Planting

Planting & Growing

Chirimen Kadsura Vine will grow to be about 15 feet tall at maturity, with a spread of 4 feet. As a climbing vine, it tends to be leggy near the base and should be underplanted with low-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Chirimén Kadsura Vine makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
